Storage and Disposal

Store unmixed powder in a cool, dry place in tightly sealed containers.

Caution: Store mixed solution in loosely sealed containers as pressure can build up if tightly sealed. Dispose of residual material or empty containers in accordance with Federal, State and local regulations. Do not contaminate water, food or feed by storage or disposal.

First Aid

EYES: Immediately flush eyes with flowing, clean water for at least 15 minutes, holding eyelids apart to irrigate thoroughly. Get immediate medical attention.

SKIN: Remove affected clothing and wash skin with soap and water of residual material or empty containers in accordance with Federal, State and local regulations. Do not contaminate water, food or feed by storage or disposal.

Important Notes

SKIN: Remove affected clothing and wash skin with soap and water. Wash clothing before reuse.

INGESTION: Get immediate medical attention.

Warranty

Sashco warrants this product will substantially meet purchaser’s specific needs and assumes all risk associated with the sale and use of this product. The foregoing express warranty is in lieu of any implied warranties, including any implied warranty of merchantability. Cleaning

Mix the entire container with 4 gallons of clean water in a clean 5-gallon plastic pail.

Brightener Strength

(for aggressive cleaning)

Mix the entire container with 4 gallons of clean water in a clean 5-gallon plastic pail.

Mixing

Stir thoroughly until the powder is mostly dissolved (which will take a few minutes, depending on water temperature). The solution will begin to “fizz” as the powder dissolves. Not all of the powder will completely dissolve in the solution; even if all of the powder is not completely dissolved, the solution is very usable. For the best and most consistent results, the solution should be used within 4 hours.

Coverage

At either strength, solution coverage is between 100 and 150 square feet per gallon (500-750 square feet per 5 gallons), depending on the wood porosity.

Application

Apply CPR to one wall at a time, starting at the bottom and working completely across, 2-5 logs high. When the bottom 2-5 logs are completely cleaned and/or brightened, then move up the wall to the next 2-5 logs. Continue in a similar pattern to the top of the wall. Work only on one small area at a time (15-25 sq. ft.) for best results. Rinse with clean water as you go. Apply via garden sprayer, brush or mop. Allow the solution to work for 5-20 minutes, keeping the surfaces wet with additional CPR solution. For best results, vigorously scrub the surfaces with a stiff-bristle brush to remove unsound surface wood. After you’ve cleaned the entire wall with the CPR solution, starting at the top, rinse the entire wall thoroughly and allow to dry before application of preservatives or stains. Repeat applications of CPR solution may be necessary for tougher discolorations, more severe UV damage and/or heavily weathered wood surfaces.

Cleaning

Clean brushes and equipment with soap and water.

Warning

Avoid contact with eyes and skin and do not ingest. Keep away from children and animals. Harmful if swallowed. CPR Log Cleaner & Brightener will not harm grass or most plants — it decomposes into water, oxygen and soda ash. Rinse grass and plants thoroughly with clean water after exposure. Solutions of CPR can be slippery until washed away! Take precautions to avoid slipping on ladders, scaffolding, decks, sidewalks, etc.
