Stained surfaces may become slippery when wet.

First Aid
Refer to the MSDS (Material Safety Data Sheet) as needed. EYES: Immediately flush with large quantities of water for at least 15 minutes. If irritation persists, see a medical doctor. SKIN: Wash with soap and water and rinse thoroughly. Wash contaminated clothing before use. INHALATION: Remove to fresh air. INGESTION: If large quantities are swallowed, DO NOT INDUCE VOMITING; seek medical help.

WARNING!
May be harmful if inhaled or swallowed. Avoid contact with eyes and skin.

Keep out of reach of children!
If you scrape, sand, or remove old paint, you may release lead dust. LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE. Wear a NIOSH-approved respirator to control lead exposure. Clean up carefully with a HEPA vacuum and a wet mop. Before you start, find out how to protect yourself and your family by contacting the National Lead Information Hotline at 1-800-424-LEAD or log on to www.epa.gov/lead.

WARNING!
Working with pressure-treated wood may be hazardous; wear appropriate protection.

WARRANTY
Sashco warrants this product will substantially meet published specifications on the date of sale. If it fails to do so, return unused portion with original sales receipt for replacement or refund, at Sashco’s sole option. This is Sashco’s sole and exclusive remedy. Purchaser must determine suitability of product for purchaser’s specific needs and assumes all risk associated with its use. This product is sold “AS IS.” To the extent permitted by law, there are no warranties which extend beyond the description on the face hereof and Sashco will not be liable for direct, indirect, special, incidental or consequential damages.

This Limited Warranty gives you specific legal rights. You may have other rights which vary from jurisdiction to jurisdiction. For a detailed description of the warranty and exclusions, please visit our website at www.sashco.com

“Bigger Way to Stain”

It’s about Transformation: an old and weathered deck brought to life again, or a fence refreshed with color when it was once only gray.

Yet these results are not what we normally observe in the real world. We see our neighbor’s deck staining or dread having to put in a full weekend’s work to sand, wash and stain our own deck. Contrary to common wisdom, having a great quality stain is only half the battle. The other half is what is neglected the most: routine maintenance. Over time, routine maintenance is truly the key to easy staining.

When done every 1-2 years on decks and 3-4 years on fences, we find that routine maintenance saves a lot of time and money by eliminating much of the prep work before staining. Simply do a light power wash, allow the wood to dry and apply a maintenance coat.

Proper application of a quality stain ensures long-term performance. Routine Maintenance

Reduce long-term costs, time and effort.

Sampling

Proper staining is where it starts. It is critical because the same stain can look very different on various species of wood. Different prep and application methods will also affect the final result. Therefore, sampling on your wood is the only way to make sure you get the color you want the first time. It’s easy: on a small, inconspicuous test area (we recommend a minimum 2 sq. ft. space), simply do each step the same exact way you will on the entire deck or fence.

• Prep the wood.
• Apply the stain.
• Let the stain dry (both before and after all coats are applied).
• If working with a contractor, don’t allow the contractor to stain until you have thoroughly discussed and demonstrated the look you want. Show him/her the sample.
• Don’t stain the entire deck or fence before you verify that you’re achieving the look you want. It is best if you can be on-site during the staining process.

Sampling

To get the look you want, sample the stain on your wood.

Prep

Proper prep starts you down the right path.

Application

Proper application of a quality stain ensures long-term performance.

Routine Maintenance

Reduce long-term costs, time and effort.
Prep

Proper substrate preparation and application mean greater longevity, a better color, and better long-term performance.

- **Make sure it sticks:** If you are changing from one stain product to another, contact us first. Transformation Deck & Fence will adhere to almost any surface that is properly prepped. Be aware that any product already on the wood that contains waxes, non-drying oils, silicones, or anything that forms thick layers on the wood can interfere with the adhesion and penetration of Transformation, or any stain, and must first be removed.

1. **Cleanliness is a virtue:** Starting with an absolutely clean surface means better penetration and adhesion of the stain, which means better longevity and a more beautiful finish. Power wash or sand wood surfaces using an Osborn® brush or 60—80 grit sand paper to remove all previous stains and loose, unsound gray or yellow wood fibers, along with surface contaminants like grease spots, pollen, bird droppings, etc. If mildew is present, apply Saschco’s CPR® in the brightener strength according to the directions or apply fresh bleach in a 4 parts water to 1 part bleach solution. Allow it to sit no more than 20 minutes, then thoroughly rinse. If necessary, use a chemical stripper. (Follow label instructions carefully and ensure wood is back to neutral pH, checking with pH strips.) New deck wood should be lightly sanded to remove mill glaze, which will increase stain penetration and adhesion.

2. **Fuzz be gone:** If you power washed, remove fuzzing (wood fuzz) with Osborn® brushes, Saschco’s Buffly Pad system or 60—80 grit sand paper once the wood is dry. Remove all sawdust with a broom, compressed air or a leaf blower.

3. **Don’t delay:** UV rays from the sun can damage cleaned wood surfaces in as little as 1 week; therefore, stain should be applied no more than 2 weeks after wood prep is completed.

4. **Sunny with a chance of more sun:** Plan to stain when the forecast is predicting clear, rain-free weather that will extend 1-2 days after the stain has been applied so the stain can dry properly. If rain can’t be avoided, be sure to protect the stain from direct rainfall for 1-2 days after the stain is applied to prevent it from being washed off the surface.

5. **Stay dry:** Use a moisture meter to make sure wood is at or below 19% moisture content level before applying stain. Damp wood can prevent proper adhesion and penetration, and leaves an uneven, consistent coat of stain.

6. **Cleanliness is still a virtue:** Lightly power wash your deck or fence to remove grease spots, pollen, bird droppings and other surface contaminants. If mildew is present, apply Saschco’s CPR® in the brightener strength according to the directions or apply fresh bleach in a 4 parts water to 1 part bleach solution. Allow it to sit no more than 20 minutes, then thoroughly rinse. Allow the surface to thoroughly dry. (This generally takes 1-2 days in ideal weather. To know for sure, use a moisture meter to check!)

Routine Maintenance

Everyone knows that a $30 oil change twice a year beats a $2,000 mechanic’s bill. Routine maintenance on your deck or fence – every 1-2 years on a deck and every 3-4 years on a fence – could be the difference between $100 annually or $2,000 every five years to completely redo the job. It’s truly the key to “a better way to stain.”

1. **Cleanliness is still a virtue:** Lightly power wash your deck or fence to remove grease spots, pollen, bird droppings and other surface contaminants. If mildew is present, apply Saschco’s CPR® in the brightener strength according to the directions or apply fresh bleach in a 4 parts water to 1 part bleach solution. Allow it to sit no more than 20 minutes, then thoroughly rinse. Allow the surface to thoroughly dry. (This generally takes 1-2 days in ideal weather. To know for sure, use a moisture meter to check!)

2. **One more coat, please:**
   - Using a sprayer, brush, roller, or stain pad, apply stain to one or two entire boards. Work in these small sections to avoid lap marks.
   - If spraying or rolling, vigorously back-brush the stain to push it into the wood. This promotes the best adhesion and penetration, and leaves an even, consistent coat of stain.
   - Allow stain to dry a full 24 hours before walking on deck surfaces. Refrain from heavy foot traffic until the stain is no longer tacky (approx. 2-5 days depending on temperature and humidity).

Application

Proper application of the stain, combined with the prep you’ve already done, will complete the transformation of your deck or fence.

1. **Just a little sprinkle:** Before applying stain, sprinkle water on the surface of the prepped wood. When the water soaks in within 2-3 minutes, the surface is ready to be stained. If the water doesn’t soak in, a previous stain may still be present and additional stain removal (usually chemical stripping) may be necessary.

2. **Say no to mildew:** Help keep surface mildew and mold at bay by adding extra mildewcides to the stain. We recommend Stay Clean I/E.

3. **Mix it up:** Thoroughly mix the stain. The preferred method is to use a drill-driven, squirrel-cage type mixer. No matter what method is used to mix the stain, you can ensure the most consistent color by:
   - Scrape all pigment off the bottom of the pail and thoroughly mixing it in.
   - Interblending pads with different lot numbers.
   - Stirring the stain every 10-15 minutes throughout application to keep the pigments evenly distributed throughout the stain.

4. **Warm feelings:** Apply Transformation to wood surfaces that are no colder than 40°F (4°C) and no hotter than 90°F (32°C). Extreme temperatures will prevent proper penetration and drying of the stain. Plan your work so that surface temperatures fall within this range. Do not apply to surfaces in direct intense sunlight and work in sections to avoid lap marks.

5. **Different coats for different folks:**
   - Using a sprayer, brush, roller or stain pad, apply one or two entire boards. Work in these small sections to avoid lap marks.
   - If spraying or rolling, immediately back-brush the stain to push it into the wood. This promotes the best adhesion and penetration, and leaves an even, consistent coat of stain.
   - Allow stain to dry a full 24 hours before walking on deck surfaces. Refrain from heavy foot traffic until the stain is no longer tacky (approx. 2-5 days, depending on temperature and humidity).

6. **Bask in it:** Enjoy your beautiful deck or fence.

Clean-up

While still wet, clean tools and equipment with water. Once dry, mineral spirits will be required on tools and equipment. Use citrus-based hand cleaners for any product that dries on skin.

Storage

Tightly reseal opened containers and store at temperatures between 50°F and 90°F (10°C - 32°C).
